

**Custom software and
embedded systems,
built right.**

COMPANY PROFILE

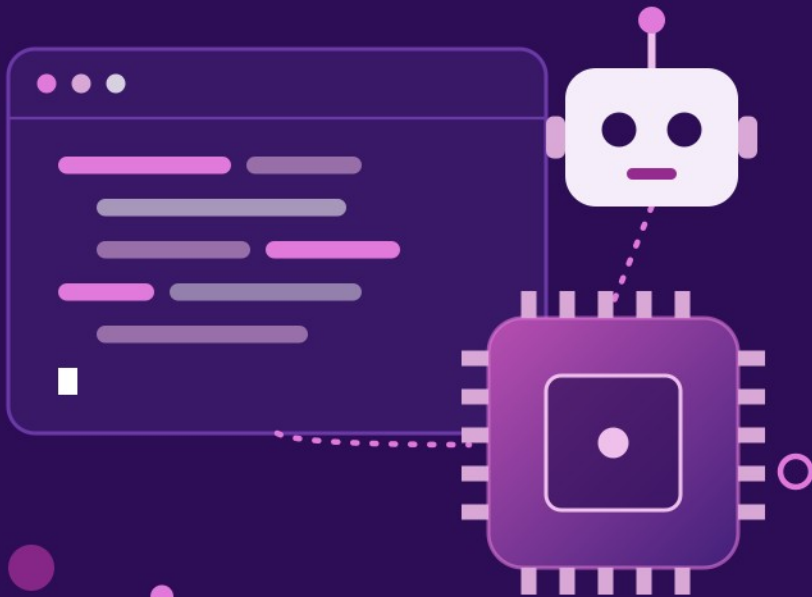

IT services and product engineering

Welcome to

TechSolinit

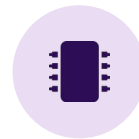

TechSolinit is an IT services and product engineering company. We partner with businesses to design, build, and ship reliable software — from web platforms to hardware-integrated systems — and stay on to support it.

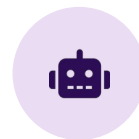

Custom software

Web and mobile applications built on modern, maintainable stacks.

Embedded & IoT

Firmware and hardware-integrated software for connected devices.

AI & automation

Agents, chatbots, and workflows that remove repetitive work.

About Us

TechSolinit is an IT services and product engineering company. We design and build custom software and embedded systems for businesses that need technology that holds up in production — whether it runs in a browser or on a board.

We're a small, focused team of engineers based in Islamabad, Pakistan, working directly with clients from idea and architecture through deployment and long-term support.

BASED IN

Islamabad, Pakistan

SERVING

**Europe, Middle East,
Asia & North America**

FOCUS

**Software, embedded
systems & AI**

Our Vision & Mission

Our Vision

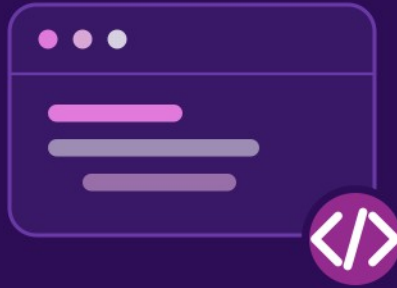

To be a trusted engineering partner for businesses worldwide — known for software and hardware that hold up in the real world, and for a team that stays accountable long after launch.

Our Mission

To design, build, and support custom software, embedded systems, and intelligent automation through direct collaboration, clear communication, and engineering that is built to last.

SERVICES • 1 OF 4

Software & Product Development

Applications and platforms built around how your business actually works — from internal systems to storefronts and games.

[View all services](#)

Custom Software Development

Web and mobile applications tailored to your workflows, built on modern, maintainable stacks.

ERP Solutions

ERP built your way — on an existing open-source or commercial platform, or fully custom.

E-commerce Solutions

Online stores on Shopify, open-source platforms, or fully custom web and mobile apps.

Extension Development

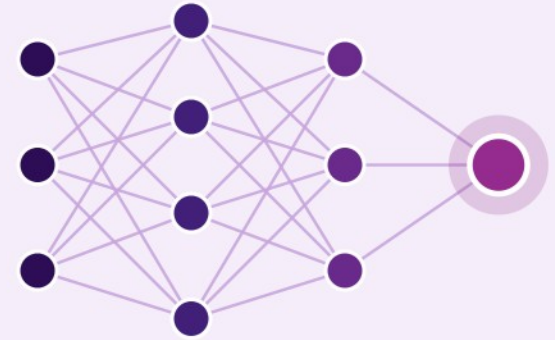

Browser and software extensions that add the exact functionality you need to existing platforms.

Game Development

Games for mobile, web, and PC — from concept to launch, on the engine that fits your project.

AI & Automation

Generative AI

Custom generative AI features and tools for content, summarization, and creative workflows, built on modern LLMs.

Agentic AI

Autonomous AI agents that plan, decide, and act on multi-step tasks with minimal human intervention.

Automation Systems

Workflow and process automation that eliminates repetitive manual work across your tools and teams.

Chatbot Development

Conversational AI chatbots for support, sales, and internal tools, tailored to your product and data.

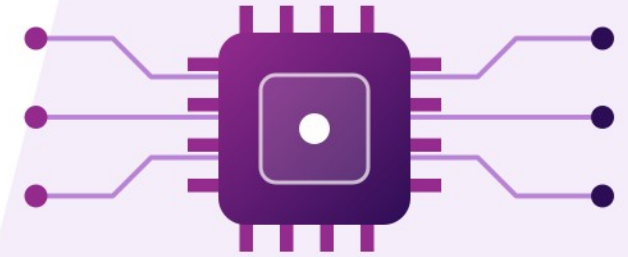

Bots Development

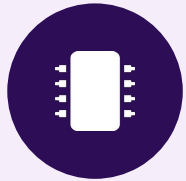

Custom bots for Slack, Discord, Telegram, and other platforms, automating tasks where your team works.

Have a repetitive process in mind?

Tell us the workflow and we'll tell you how we'd automate it.

Embedded, Cloud & Infrastructure

Embedded & IoT Systems

Firmware and hardware-integrated software for connected devices, sensors, and control systems.

Cloud & DevOps

Infrastructure, CI/CD, and deployment pipelines that keep your systems reliable and scalable.

Networking

Network design and setup for new or growing offices — wired and wireless infrastructure that just works.

Systems Integration

Integrating third-party providers, APIs, and data sources directly into your existing systems.

IT Consulting

Technical strategy and architecture guidance to help you make the right calls before you build.

Support & Maintenance

Ongoing monitoring, updates, and support to keep what we build running smoothly.

SEO & AEO

Search and answer engine optimization, so people — and AI — can find you.

Social Media Management & Marketing

Content creation and social media management to build and grow your presence across platforms.

Creative & Design Services

Graphic design, photography, photo and video editing, and 3D design for your brand and products.

SERVICES • 4 OF 4

Consulting, Support & Digital Growth

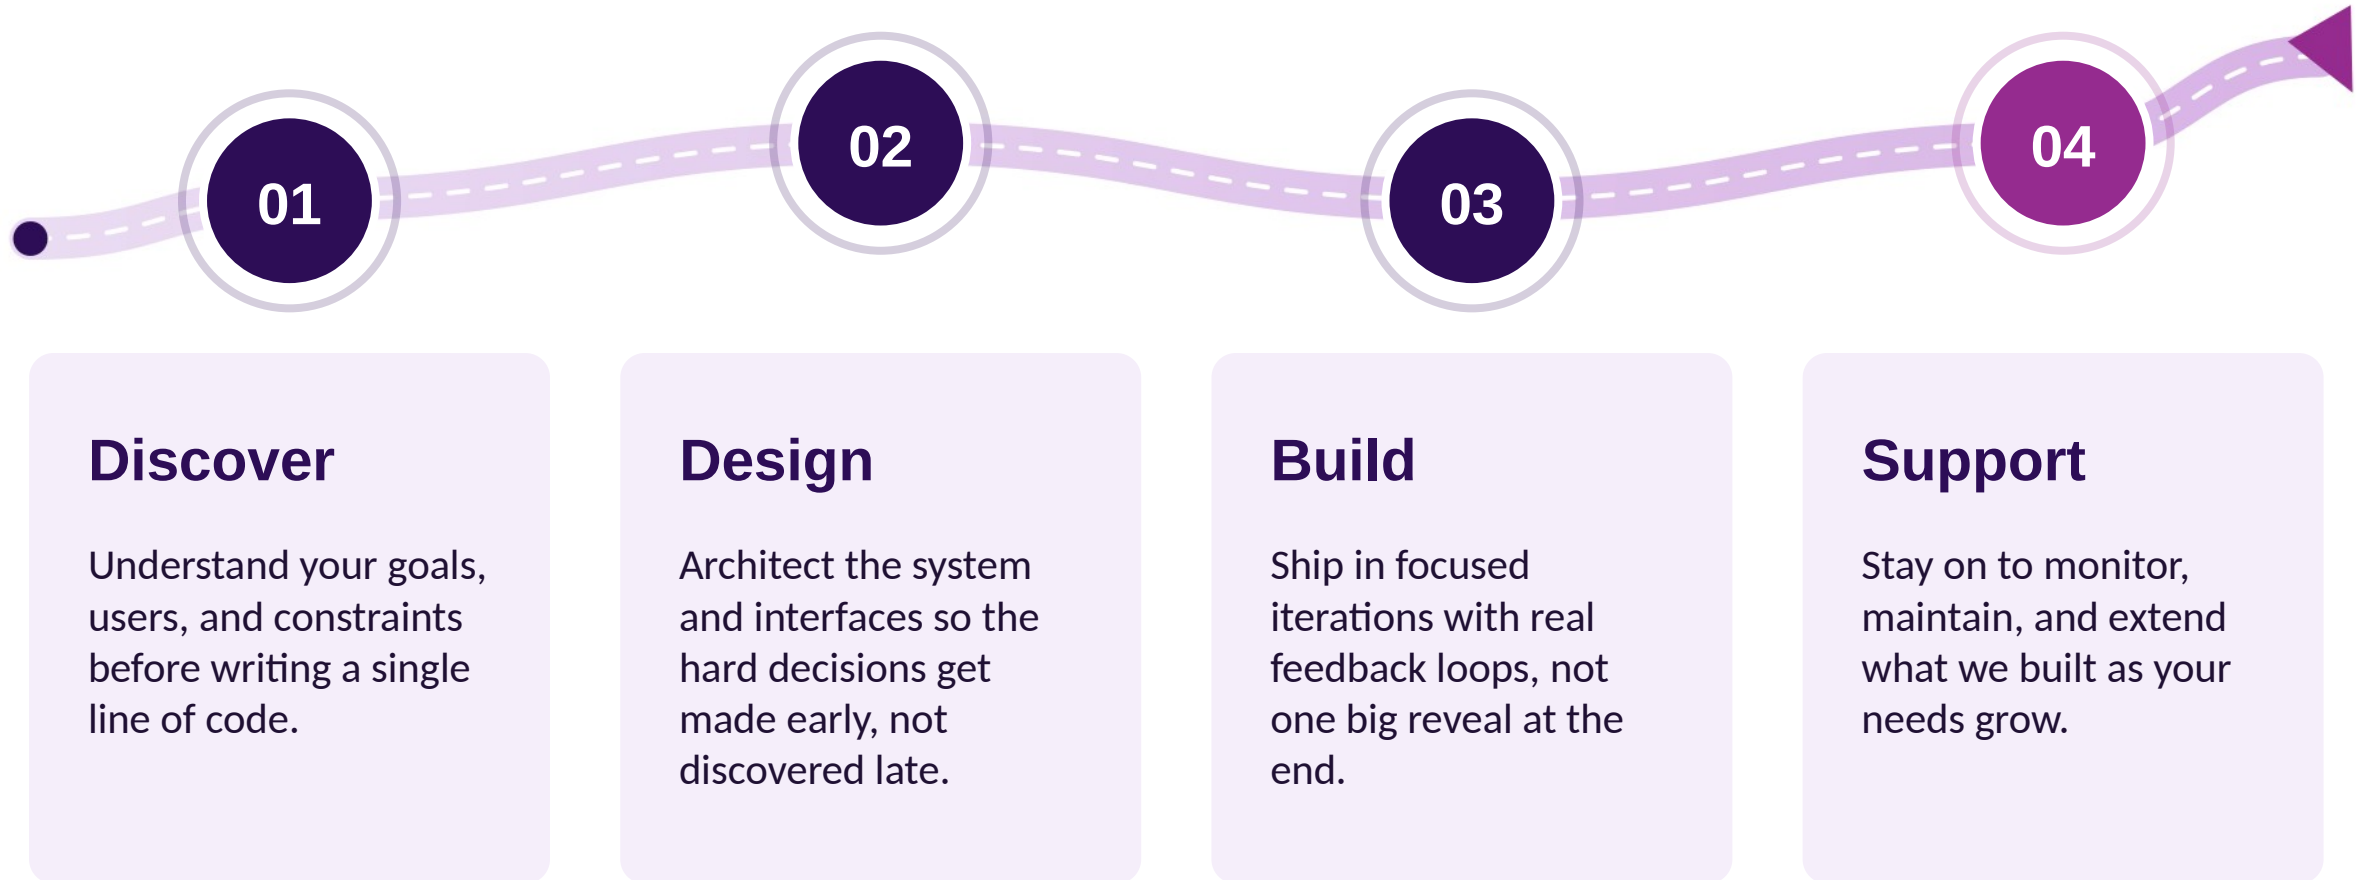

Guidance before you build, support after you launch, and the creative and marketing work that gets you found.

How We Work

A straightforward process, repeated on every project regardless of size.

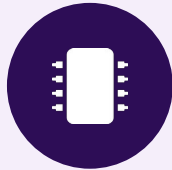

Why Choose TechSolinit?

We're a small, focused team of engineers who care about building software that holds up in production — whether it runs in a browser or on a board.

End-to-end engineering

From architecture to deployment, we own the full lifecycle instead of handing off pieces.

Hardware and software fluency

Our team moves comfortably between application code and embedded systems.

Built to last

We write software we're accountable for maintaining, not just shipping.

Direct collaboration

You work with the engineers building your product, not a rotating account team.

Built in Pakistan. Delivered anywhere.

Our engineering team is based in Islamabad, Pakistan, and works with clients across Europe, the Middle East, Asia, and North America — wherever you're building from.

Direct on Discord

You're in Discord with the actual engineers building your project — not routed through an account manager.

Daily standups & weekly demos

Quick daily syncs plus regular demos of real, working software — not status meetings.

Shared ahead of time

What we're building today or this week is shared with you in advance, not sprung on you at review.

Have a project in mind?

Tell us what you're building — we'll tell you how we'd approach it.
